the idea of preparing a technical document for the repairs and interventions upon concrete structures goes back to the former fib com5 structural service life aspects being the goal of the then tg5 9 after a long period of reduced activity and taking into account the reorganization of fib commissions that meanwhile took place on june 2017 a different approach was proposed to push forward the task of tg8 1 formerly tg5 9 the new goal of tg 8 1 was to deliver a how to do guide gathering together protection repair and strengthening techniques for concrete structures chapters are intended to provide both guidelines and case studies

serving as support to the application of fib mc2020 pre normative specifications each chapter was written by an editorial team comprising desirably at least a researcher a designer and a contractor templates have been prepared in order to harmonize the contents and the presentation of the different methods following the writing process chapters were reviewed by experts and after amendments by the authors they underwent a second review process by com8 and tg3 4 members as well as by different practitioners for each protection repair and strengthening method addressed in this guide readers have a description of when to adopt it which materials and systems are required which techniques are available and what kind of equipment is needed it then presents a summary of stakeholders roles and qualifications design guidelines referring to most relevant codes and references the intervention procedure quality control measures and monitoring and maintenance activities due to the extent of the guide it was decided to publish it as bulletin 102 addressing protection and repair methods and bulletin 103 addressing strengthening methods we would like to thank the authors reviewers and members of com8 and tg3 4 for their work in developing this fib bulletin which we hope will be useful for professionals working in the field of existing concrete structures especially those concerned with life cycle management and conservation activities as noted above this bulletin is also intended to act as a background and supporting document to the next edition of the fib model code for concrete structures which is currently under development under the auspices of tg10 1 with the working title of fib model code 2020

steel reinforced concrete is used ubiquitously as a building material due to its unique combination of the high compressive strength of concrete and the high tensile strength of steel therefore reinforced concrete is an ideal composite material that is used for a wide range of applications in structural engineering such as buildings bridges tunnels harbor quays foundations tanks and pipes to ensure durability of these structures however measures must be taken to prevent diagnose and if necessary repair damage to the material especially due to corrosion of the steel reinforcement the book examines the different aspects of corrosion of steel in concrete starting from basic and essential mechanisms of the phenomenon moving up to practical consequences for designers contractors and owners both for new and existing reinforced and prestressed concrete structures it covers general aspects of corrosion and protection of reinforcement forms of attack in the presence of carbonation and chlorides problems of hydrogen embrittlement as well as techniques of diagnosis monitoring and repair this second edition updates the contents with recent findings on the different topics considered and bibliographic references with particular attention to recent european standards this book is a self contained treatment for civil and construction engineers material scientists advanced students and architects concerned with the design and maintenance of reinforced concrete structures readers will benefit from the knowledge tools and methods needed to understand corrosion in reinforced concrete and how to prevent it or keep it within acceptable limits

this volume contains the proceedings of the 12th international conference on geosynthetics 12 icg held in roma italy 17 21 september 2023 about 750 authors academics researchers students practitioners contractors and manufacturers contributed to the peer reviewed papers of this volume which includes the giroud lecture the bathurst lecture the rowe lecture four keynote lectures and 296 technical papers the content of these proceedings illustrates the sustainable use of

geosynthetics in a variety of innovative as well as consolidated applications after the sustainability implications in the correct use of geosynthetics the ability to overcome the natural events effects often related to the climate change and to adequately afford the human activities as the increase of pollution forced to refer to a new keyword resiliency the 12 icg intends to become the base for the next step hence the conference theme is geosynthetics leading the way to a resilient planet the conference topics through general and parallel sessions invited presentations and keynote lectures address the most recent developments in geosynthetic engineering and stimulate fruitful technical and scientific interaction among academicians professionals manufacturers students the 12 icg proceedings contain a wealth of information that could be useful for researchers practitioners and all those working in the broad innovative and dynamic field of geosynthetics

plasters paints and coatings are what define surfaces create spatial effects and interplay with light how they are used is decisive for a building s appearance and they also serve as a protective layer a new volume in the detail practice series plaster render paint and coatings presents a survey of impressive proven and innovative solutions the authors describe and define the basic essentials show what to look for and offer valuable tips for practical applications taking two example buildings the authors also document the structural design of all important connection points at a scale of 1 10 new building or renovation solutions for the application of plaster and paint guide which paint for which surfaces design details for solutions with external thermal insulation composite systems separate manufacturer s guidelines for plasters and paints

many concrete structures around the world have reached or exceeded their design life and are showing signs of deteriorating any concrete structure which has deteriorated or has sustained damage is a potential hazard

in the field of construction the maintenance and repair of concrete structures has become a core activity and the protection of concrete is thus of primary concern coatings for concrete should protect against corrosion of the reinforcement and against surface attack this book addresses the whole subject in a practical way looking at the chemistry applications and use of the major categories of coatings

the manual addresses fundamental questions of sustainability including life span environmental impact and material cycles while also presenting material innovations all of the principal conventional and innovative construction materials are documented with attention to their production treatment surfaces connections and characteristics
