case studies in immunology seventh edition is intended for medical students and undergraduate and graduate students in immunology it presents major topics of immunology through a selection of clinical cases that reinforce and extend the basic science each case history is preceded by essential scientific facts about the immunological mechanisms o

from fundamentals to plant operations albright s chemical engineering handbook offers a thorough yet succinct guide to day to day methods and calculations used in chemical engineering applications leaders from an exceptional diversity of specialties provide a clear review of basic information case examples and references to additional information they discuss essential principles calculations and key issues such as reaction engineering process control and design waste disposal and electrochemical and biochemical engineering the final chapters cover aspects of patents intellectual property communications and ethics that are most relevant to engineers

introduction to chemical reactor analysis second edition introduces the basic concepts of chemical reactor analysis and design an important foundation for understanding chemical reactors which play a central role in most industrial chemical plants the scope of the second edition has been significantly enhanced and the content reorganized for im

this is an in depth monograph covering the topic of energy transfer and reactions on solid surfaces this topic is of great interest now because of its applications to catalysis and solid state electronics including the manufacture of semiconductors integrated circuits and other solid state devices initially it describes what is meant by heterogenous reaction dynamics basically this is the study on a molecular level of the elementary dynamics of energy transfer and reactions at surface the emphasis of the book will be on well characterized solid surfaces energy transfer and reactions are broadly defined to include phase transitions in adsorbed layers diffusion the absorption process itself and energy transfer between adsorbate and substrate as well as gas surface energy transfer catalytic and oxidative type surface reactions

a range of alternative mechanisms can usually be postulated for most organic chemical reactions and identification of the most likely requires detailed investigation investigation of organic reactions and their mechanisms will serve as a guide for the trained chemist who needs to characterise an organic chemical reaction and investigate its mechanism but who is not an expert in physical organic chemistry such an investigation will lead to an understanding of which bonds are broken which are made and the order in which these processes happen this information and knowledge of the associated kinetic and thermodynamic parameters are central to the development of safe efficient and profitable industrial chemical processes and to extending the synthetic utility of new chemical reactions in chemical and pharmaceutical manufacturing and academic environments written as a coherent account of the principal methods currently used in mechanistic investigations at a level accessible to academic researchers and graduate chemists in industry the book is highly practical in approach the contributing authors an international group of expert practitioners of the techniques covered illustrate their contributions by examples from their own research and from the relevant wider chemical literature the

book covers basic aspects such as product analysis kinetics catalysis and investigation of reactive intermediates it also includes material on significant recent developments e g computational chemistry calorimetry and electrochemistry in addition to topics of high current industrial relevance e g reactions in multiphase systems and synthetically useful reactions involving free radicals and catalysis by organometallic compounds

this text provides a balanced presentation of the concepts of physical chemistry and their applications to biology and biochemistry written to straddle the worlds of physical chemistry and the life sciences it shows students how the tools of physical chemistry can elucidate biological questions

this annual review the 50th volume in the series provides critical analysis for anyone wanting to keep up to date with the literature on photochemistry and its applications this essential volume combines reviews on the latest advances in photochemical research with specific topical highlights in the field the volume starts with periodical reports of the recent literature on organic and computational aspects including computational advances in photochemistry chemiluminescence and dark photochemistry organic aspects of photochemistry of alkenes dienes and polyenes aromatic compounds oxygen containing functions and those functions containing other heteroatoms and finally a chapter on transition metal catalysis coverage continues in the second part with highlighted topics including photochemical tools for sensing and controlling biological processes visible light driven enantioselective processes photochemical formation of c chalcogen bonds photoelectrocatalysis photovoltaic techniques photochemical activation of aryl chlorides luminescent water soluble systems and computational analyses of fluorescence absorption spectra this volume will again include a third section entitled spr lectures on photochemistry providing examples for academic readers to introduce a photochemistry topic and precious help for students in photochemistry
